### MasterPiece Arms

MasterPiece Arms manufacturing facility is located in Comer, GA in our 20,000 sq ft building and 6 acres of land. We are one of the few firearms companies that produces the majority of our own components within our facility. Our product line includes over 48 CNC Machine Tools, including Vertical & Horizontal Machining Centers, Swiss Turn CNC Lathes, Multi Axis CNC Lathes, 5 Axis Vertical CNC, Robotic Load/Unload Automation, Heat Treat, Conversion Coatings Systems for Black Phosphate and Black Oxide as well as Miller Syncrowave TIG Welding Systems. Other than Springs, polymer (injection molding), and fasteners, we turn, machine, fabricate, weld, heat treat, coat and assemble almost every part utilized in our weapons. We are definitely NOT an assembly house. We design and build all of our own machining and turning fixtures, test benches, assembly and welding Fixtures, and Special Gaging.

Our Inspection Equipment includes (3) CMM’s, Micro-hites, Skidded/Skiddless Profilometers, Ballbar Systems (for machine Accuracy), Clamp Force Meters (Spindle Clamping Force) and an enormous quantity of micrometers, calipers, depth gages, Intrinsics, Thread Gages and other miscellaneous inspection tools.

A full staff of Manufacturing Engineers are constantly working on new weapon designs, product enhancement and other engineering related functions. The Staff uses Solidworks, Mastercam, and Surfcam for all of our solid modeling and CAD/CAM requirements.

At MPA, we are passionate about weapons and the firearms market. Every MPA Firearm that leaves our facility is built by personnel who truly care about the products we are producing and providing to the US and International Markets. We are proud to be an American Firearms Manufacturer.

The entire product line for Masterpiece Arms lends itself well to the many accessories available. We are constantly adding new items designed to enhance the consumers interaction with our products. This includes uppers, brakes, mounts, magazines and magazine extenders, stocks and other items designed to improve performance and increase the usage of the product line. Our Defender pistols and carbines are modular.

A standard Defender pistol can be converted into a carbine with the addition of an upper receiver kit. These pistols are also easily converted into SBRs (provided the customer follows NFA rules) with the use of side folding stocks and extended handguards and barrel lengths.
